ans

Press Release

euro CAR PARTS
Any Part For Any Car

Euro Car Parts Ltd rapidly go from 0 to 60 with ANS

Background.

Euro Car Parts Ltd, the UK's number one supplier of car parts, has appointed ANS for its datacentre transformation programme. The partnership forms part of a strategic investment plan, aimed at providing a scalable IT production environment, enabling the organisation to support future growth in line with their business vision.

The appointment of Chief Information Officer of Euro Car Parts (ECP), Andy Campbell, gave the organisation an opportunity to assess their current infrastructure and further align technology to the core of their business and customer interactions. ECP chose to utilise pioneering RAPID technology from ANS Group which is based on integrated infrastructure from Cisco and NetApp – FlexPod - and delivered to customers within 28 days.

Pre-integrated and pre-validated RAPID Converged Infrastructure, will allow ECP to develop, modernise and deploy their business applications faster. The new infrastructure will ensure the organisation can efficiently manage resources across physical and virtual environments, allowing their IT team to respond quickly to infrastructure requests. Andy Campbell explained the reasons behind the transformation:

> "RAPID offers us a single point of purchase, support, maintenance and upgrade for a pre-tested and fully maintained complete solution. With no lengthy deployment time, we're able to lead the way in technology and can start using and creating value from our infrastructure immediately."

The appointment of Chief Information Officer of Euro Car Parts (ECP), Andy Campbell, gave the organisation an opportunity to assess their current infrastructure and further align technology to the core of their business and customer interactions. ECP chose to utilise pioneering RAPID technology from ANS Group which is based on integrated infrastructure from Cisco and NetApp – FlexPod - and delivered to customers within 28 days.

Pre-integrated and pre-validated RAPID Converged Infrastructure, will allow ECP to develop, modernise and deploy their business applications faster. The new infrastructure will ensure the organisation can efficiently manage resources across physical and virtual environments, allowing their IT team to respond quickly to infrastructure requests. Andy Campbell explained the reasons behind the transformation:

"More and more we see a demand for IT to add real business value across the organisation. RAPID offers us a single point of purchase, support, maintenance and upgrade for a pre-tested and fully maintained complete solution. With no lengthy deployment time, we're able to lead the way in technology and can start using and creating value from our infrastructure immediately."

RAPID and FlexPod are ANS core business and they have an unparalleled track record of delivering projects on time and to budget. Having delivered over 50% of all UK FlexPod deployments ANS are the market leader in Integrated Infrastructures, Europe's most experienced FlexPod integrator.

Gareth White, from ECP commented on the relationship between the two organisations:

"What ANS do is incredibly valuable, they bring it all together, the setting, the configuration, which means we receive a full solution aligned to our requirements; not a set of components. We know, that selecting ANS as our strategic partner, means we will effectively deliver, now and over the coming years"
