Cloud Score

In partnership with

Cloud Score

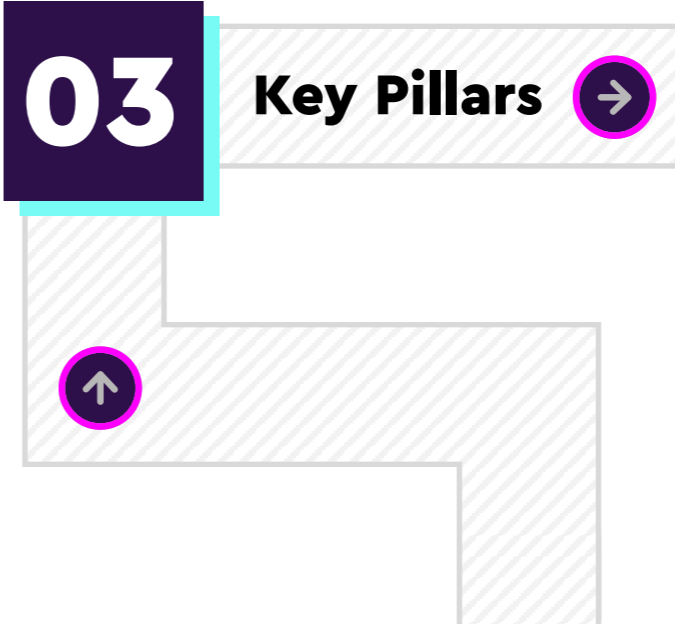

Cloud Score is our unique scoring mechanism designed to rate your overall cloud health, so that you can improve and optimise your cloud environment.

Designed to both challenge and educate you to get the best out of your cloud environment, Cloud Score works by breaking down various elements of your cloud environment, such as application on-boarding, tagging, monitoring, and security to give you a completely transparent insight into how well your environment is operating.

We'll start by giving your Cloud environment an initial score along with recommendations to help you optimise your environment and increase your overall rating so you can start reaping all the possible features and benefits of cloud.

Once you move out of the foundation stage and move into Advanced and Native, you will be presented with 3 key pillars – Operations, Technology and Strategy to provide a more granular breakdown...

01

Operations

We'll look at core components of the managed service, including rightsizing and instance modernisation to drive efficiencies and cost savings.

02

Technology

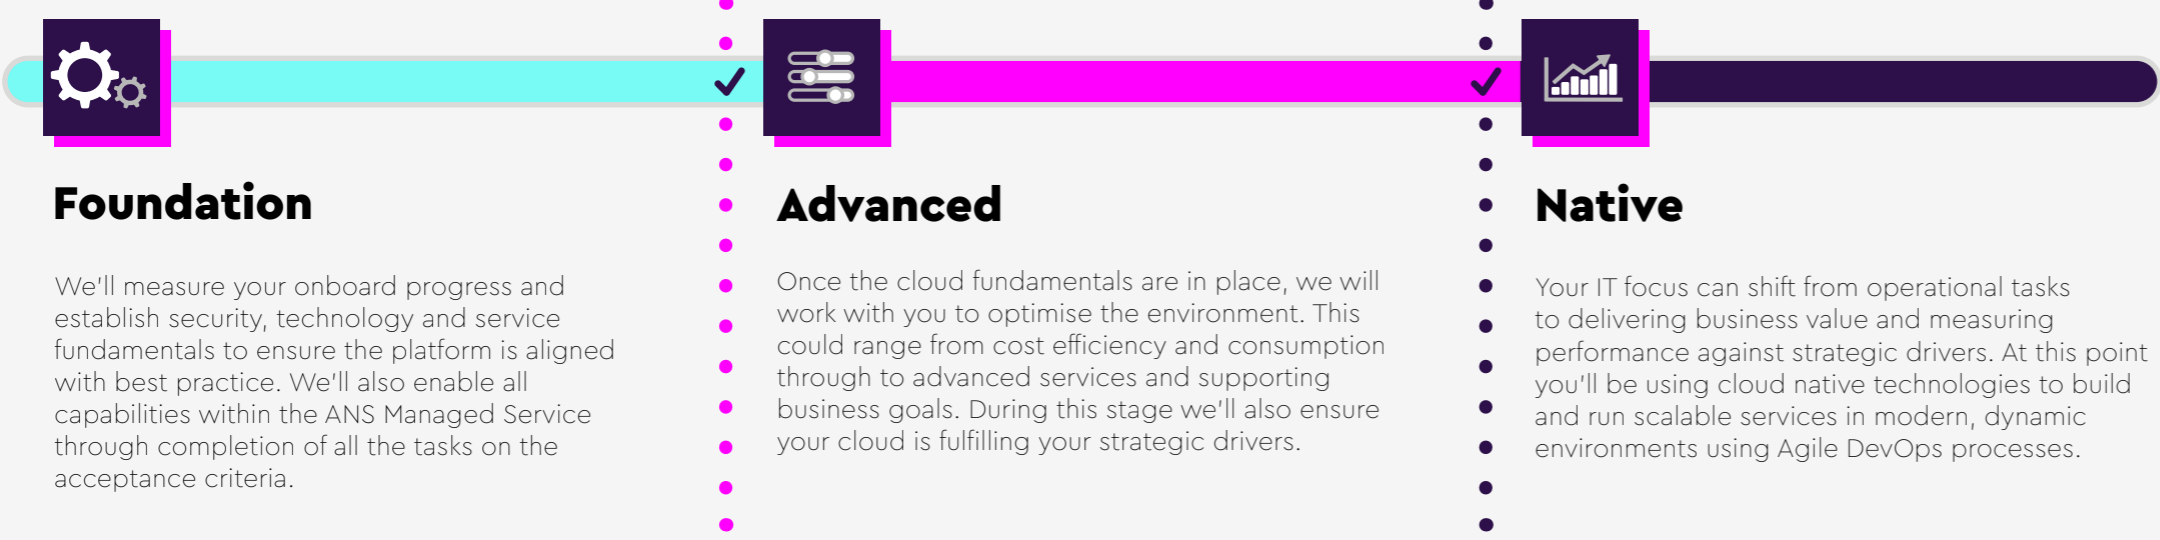

We'll ensure you are utilising the best technologies in line with best practice to achieve your desired business goals.

03

Strategy

This will be a CSM driven conversation to understand your strategic drivers for cloud adoption. This will vary depending on each stage.

3 Cloud Score stages...

Foundation

We'll measure your onboard progress and establish security, technology and service fundamentals to ensure the platform is aligned with best practice. We'll also enable all capabilities within the ANS Managed Service through completion of all the tasks on the acceptance criteria.

Advanced

Once the cloud fundamentals are in place, we will work with you to optimise the environment. This could range from cost efficiency and consumption through to advanced services and supporting business goals. During this stage we'll also ensure your cloud is fulfilling your strategic drivers.

Native

Your IT focus can shift from operational tasks to delivering business value and measuring performance against strategic drivers. At this point you'll be using cloud native technologies to build and run scalable services in modern, dynamic environments using Agile DevOps processes.

✓ Your cloud environment will require a pass mark to progress to the next level.

Benefits of Cloud Score

- Provides granularity in comparison to traditional reporting methods
- Provides you with access to more regular data
- Ensures we are aligning our recommendations to your strategic goals
- Drives continuous value add across your Managed Service
- Opens up key conversations about your strategy
- Gives you a clearly defined journey for your cloud operations
