Azure
Expert
MSP

ANS is working in collaboration with Microsoft's Covid-19 emergency fund to provide you with a highly reliable Windows Virtual Desktop solution in under 2 weeks.

We will remotely provision and integrate a workable solution which will comply to the most stringent governance and security standards to get your workforce up and running quickly and securely from anywhere.

Leveraging the scale of ANS' delivery operation, we will deploy a rapid build process which is remotely delivered from our 24x7x365 UK based operation. The engagement will deliver a fully functional production grade Windows Virtual Desktop environment to support your remote working needs with the following key highlights:

1

Highly standardised

We'll deliver a configurable build to enable a standardised statement of work, build process and engagement to reduce time to provision by up to 90%.

2

Rapid Build Process

We'll use a mature remote delivery methodology to ensure a quality build without the need for significant input from you.

3

Proven Architecture

We'll utilise a build that has already been provisioned with proven success and stable functionality.

4

Unique Handover Support

You'll receive real world SAT testing and configuration changes during BAU transition to ensure the solution works for your organisation and your workforce.

5

High Touch Project Support

You'll receive a dedicated Project Manager and short project kick off lead times to get the project off the ground quickly and ensure a smooth delivery.

Need urgent assistance?

We're here to help.

Speak to your ANS account manager to request a virtual meeting.

Throughout the project, ANS will provide high-touch support.

Once live, ANS can provide various levels of high touch support to ensure the successful adoption of the service both across the short and long term.
