Windows Virtual Desktop Proof of Concept

ans

ANS is working in collaboration with Microsoft's Azure Accelerate programme to provide you with a Window's Virtual Desktop proof of concept in under 2 weeks.

Our Windows Virtual Desktop proof of concept has been designed to help teams that are looking for an effective remote working solution but may be struggling to secure business support to proceed with the project. You could go it alone, but by working with ANS, we can help you understand what the adoption plan will look like as well as helping you to build the business case and test-drive the technology, giving you with the knowledge and confidence that you're making the right decision for your organisation.

Leveraging the scale of ANS' delivery operation, we will deploy a rapid build process which is remotely delivered from our 24×7×365 UK based operation. The engagement will deliver against your specified success criteria to provide your business with the confidence that WVD is the right solution for your remote desktop capability moving forwards.

The proof of concept will deliver the following key highlights:

1 **Rapid Build Process**

We'll use a mature remote delivery methodology to ensure a standardised best practice build without the need for significant input from you.

2 **Reduces Risk**

We'll ensure any potential risks are identified prior to project kick off and prior to any financial commitment.

3 **Runs alongside Cloud Transformation Insights**

Running a POC in conjunction with Cloud Transformation Insights will help you to understand the likely success of the project and the associated commercials.

4 **Try before you buy**

By test-driving the technology with no lengthy commitments, you can make an informed decision to determine if WVD is right for your users and your business.

ANS' Account Management and Solution Architecture teams will help you to navigate your journey into cloud with the adoption of WVD. Our goal is work collaboratively with you to help you understand the true cost of ownership and operational benefits to enable you adopt this technology successfully.
