Microsoft Power Platform

Get Started with Power Platform

Power Platform AI
Starter Pack: Fundamental

The low-code we know today is quite different than when it was first introduced.

Low-code 1.0

Facilitated "Shadow IT" since departments other than central IT deployed their own systems to make improvements.

Low-code 2.0

Increased speed of solution development but also resulted in greater management overhead and exacerbated the "trust" issues surrounding low-code security and compliance.

Today

Low-code 3.0

Centralization of multiple platforms, encompassing best practices, and scalable across the organization.

Power Platform

The most complete low-code platform

Power Apps
Web and mobile app development

Power Automate
Process and workflow automation

Copilot Studio
Customize and create copilots

Power Pages
Secure, data-centric business websites

Power BI
Data exploration, analytics, and reporting

Power FX · **Managed Environments** · **Dataverse** · **1000+ Connectors** · **AI Builder**

Copilot in Power Platform brings the power of natural language development to build and deploy low code solutions and bring ideas to life with just a description.

Imagine it. Describe it. Power Platform builds it.

Power Apps

Power Automate

Copilot Studio

Power Pages

Power BI

45%
Reduction in development costs

140%
Return on investment over 3 years

84%
Of enterprises build with low-code

Real-world Power Platform scenarios

Scenario 1: Paper Processes

Digitize inventory management or order processing with custom apps, streamlining workflows and enhancing accuracy

Automate employee onboarding, minimizing paperwork and streamlining processes

Develop a copilot for automated customer feedback and surveys, providing real-time insights

Keep business resources on your own professional website to reduce the amount of paper handouts when meeting customers

Scenario 2: Complex Processes

Design a project collaboration app to track tasks assign responsibilities, and streamline project management

Automate purchase order approvals involving multiple stakeholders, saving time and reducing errors
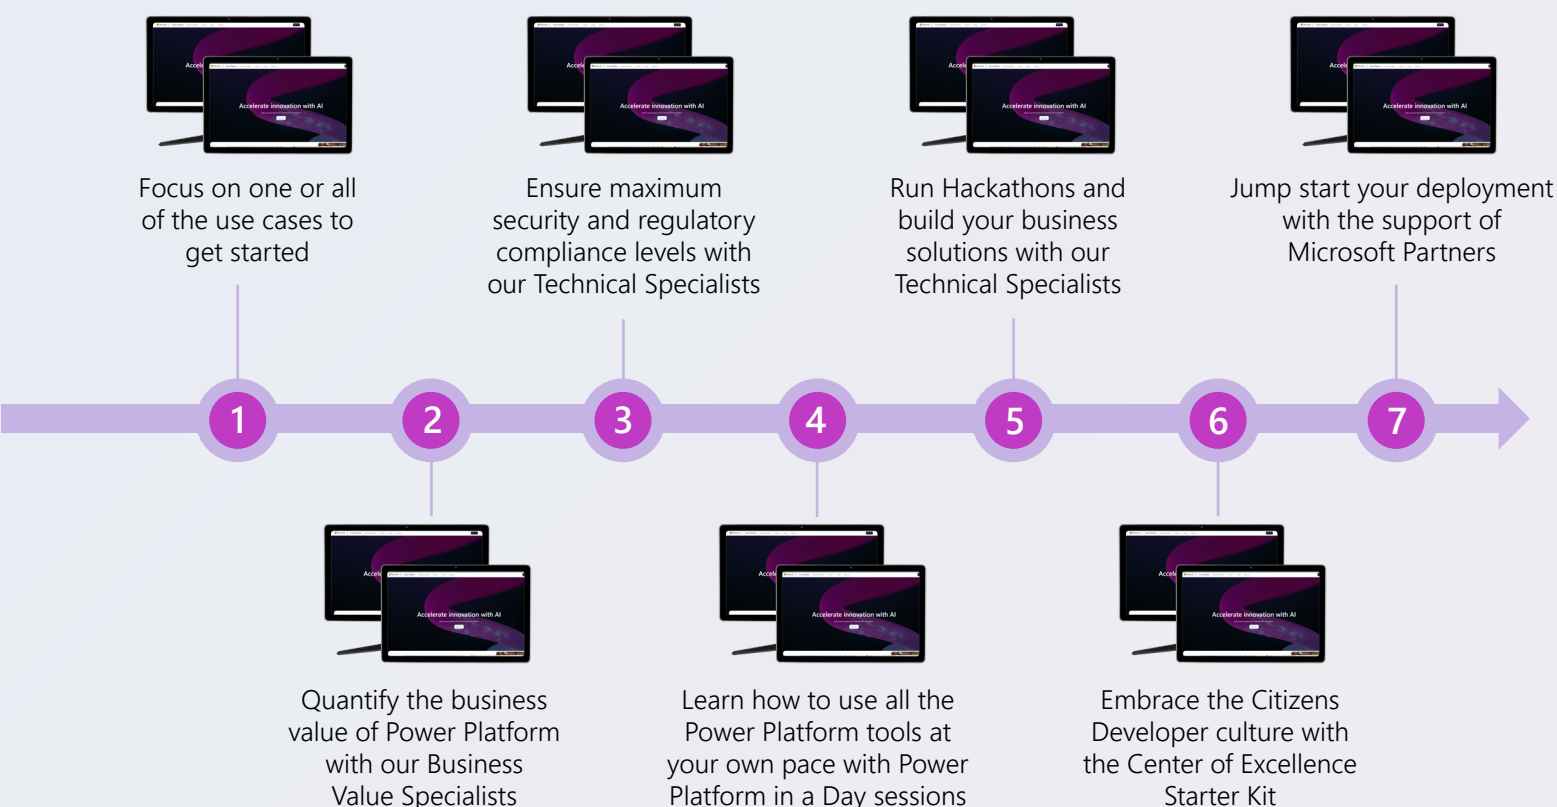

Build a copilot for self-service IT support, reducing the need for extensive IT personnel and improving issue resolution times

Create a professional website that allows for easy mobile access to showcase your business on-the-go

Set up for success

Focus on one or all of the use cases to get started

Ensure maximum security and regulatory compliance levels with our Technical Specialists

Run Hackathons and build your business solutions with our Technical Specialists

Jump start your deployment with the support of Microsoft Partners
