

How to install Power BI Desktop and training resources

Our Technical Team is here to help, please reach out to Ian.Pike@ans.co.uk if you have any questions

To take part in the event, there are a few prerequisites that need to be completed in advance. Firstly, you need to have Power BI Desktop installed on your laptop. Also, you need to have downloaded the Training Resources.

Both of these are free and below are the links required. Power BI Desktop is only available on a Windows laptop, if you have an Apple Mac refer to this [link](#) for options.

To download and install Power BI Desktop, there are two options for this:

1. Download and install the application from here, <https://aka.ms/pbiSingleInstaller>
2. You can download the application from the Microsoft Store on your Windows Laptop (if your organisation allows this).

For more detailed instructions review this [Install the Power BI Desktop application - Training | Microsoft Learn](#)

Also, download the training resources for the day from here [DIAD Starter files](#). Follow these instructions [Unzip the course files - Training | Microsoft Learn](#)

Please ensure that these have been done prior to the workshop on the laptop you will use as they might require your organisation to authorise this.

You will also need an internet connection in order to access the internet during the workshop. For in-person, ANS will provide credentials for our guest WiFi, but if you are using an organisational laptop, you should confirm with your administrators in advance that it will be able to join the network.

Best wishes
